## **88 State and National Groups Call on President Trump to Invoke Full Powers under Defense Production Act to Spur Immediate Mass Production of Ventilators and Medical Supplies to Save American Lives**

Today, 88 state and national organizations representing Americans with chronic health conditions and disabilities, and other groups, wrote to President Donald J. Trump urging him to invoke his full powers under the Defense Production (DPA) not only to rationally allocate scarce equipment but also to spur a dramatic increase in the immediate production of ventilators, personal protection equipment and other essential medical supplies, as the Covid-19 virus spreads throughout the country exhausting supplies of these essential items.

Their request follows that from the American Medical Association, the American Hospital Association and the American Nurses Association that the President immediately use the manufacturing authority in the DPA to increase the domestic production of supplies and equipment that hospitals, physicians, nurses and all front line providers so desperately need, so as to save hundreds of thousands of American lives.

The groups state in their letter that “Many of our clients, members and staff have conditions which put them at particular risk of severe complications and death in the event they contract the Covid-19 virus,” and state: “We have a well-grounded fear that an approach to wait and see if existing efforts are sufficient will put vulnerable individuals’ health and lives at risk. Invoking this DPA manufacturing authority at that point will be tragically too late.”

There are already suggestions that families and even people who have filled out advance directives will have their wishes overridden because within a particular hospital a ventilator might be required for someone higher on a priority list. The groups do not want someone’s life to end as families and doctors scream at each other in the hospital corridor outside her isolation room.

The groups state: “Given the shortage, individuals who have disabilities and chronic health conditions are very likely to be the ones denied this life-sustaining equipment, no matter what laws like the Americans with Disabilities Act say, because someone trying to manage in the overwhelming crisis will say they are less likely than younger and healthier people to survive their ordeal.”

The groups issued their letter to the President despite his limited order under the DPA issued March 27th to one company, General Motors. That action is not enough – it could be nothing more than a one-time command to get a one-time advantage in negotiations with GM. The plan for the GM factory is not expected to bring ventilators on-line for many months to come, it does not address the immediate need for ventilators, and it does not address the need for other kinds of equipment and supplies necessary to keep Americans, including particularly health care workers, alive, such as personal protection equipment. Given the life and death stakes, Americans have a right to much more.

The President  
The White House  
1600 Pennsylvania Ave., NW  
Washington, D.C. 20500

**Re: Urgent Request to Invoke Powers under the Defense Production Act to Save American Lives**

Dear Mr. President:

We are a broad group of state and national disability and chronic health conditions, disability rights, and health and other organizations concerned with and representing individuals throughout the country with a variety of health conditions. Many of our clients, members and staff have conditions which put them at particular risk of severe complications and death in the event they contract the Covid-19 virus. We write to join the request of the American Medical Association, the American Hospital Association and the American Nurses Association that you immediately use the manufacturing authority in the Defense Production Act (DPA) to increase the domestic production of personal protective equipment, medical supplies and equipment that hospitals, health systems, physicians, nurses and all front line providers so desperately need, so as to save hundreds of thousands of American lives.

We very much appreciate the efforts that you have already taken to respond to the Covid-19 pandemic, including your declaration of a national emergency. We also appreciate your using your executive authority on March 18 to invoke the DPA's authority generally. Your call to manufacturers to voluntarily ramp up production of these crucial supplies and equipment has been helpful, so far as it has gone. And the FDA, with your support, just released guidance to help manufacturers produce more ventilators, and issued an emergency use authorization to cover other equipment that can be modified to operate as a ventilator.

While your encouragement and the FDA guidance are both helpful, almost all projections are that these efforts alone will not meet the need. Even with an infusion of supplies from the strategic stockpile and other federal resources, there will not be enough personal protective equipment (like N95 respirators), medical supplies, including ventilators, to respond to the projected outbreak. The ventilator shortage nationally is expected to be in the hundreds of thousands during the peak. Already, hospitals in New York have started to use the highly unorthodox technique of splitting one ventilator to keep alive two people. This untested and drastic approach is being deployed despite strong misgivings from experts because of the severe shortage — there is simply no other choice.

Quite soon, painful choices about who lives and who dies because of an absence of ventilators will need to be made by someone – maybe doctors, as we have sadly seen in Italy. Given the shortage, individuals who have disabilities and chronic health conditions are very likely to be the ones denied this life-sustaining equipment, no matter what laws like the Americans with Disabilities Act say, because someone trying to manage in the overwhelming crisis will say they are less likely than younger and healthier people to survive their ordeal.

The best way to avoid this catastrophe is to follow the policy you have started to set – to produce enough vitally necessary medical equipment, and personal protective equipment, so that the tragic shortages we will inevitably have can be held to a minimum. We know that you have wanted to hold the DPA's manufacturing authority in reserve, to be used when and if the country needs it. Unfortunately, the events of the past few days have shown that, despite manufacturers' best efforts, the country needs you to invoke it now.

As you have aptly pointed out, this is a war against an unseen enemy. Invoking the DPA's allocation authority was the right step for you to begin to fight that war. It is now time to move onto the next step to invoke the **manufacturing** authority of the DPA to assure full federal funding for the conversion of factories and the guaranteed federal purchasing of all needed equipment and supplies in the categories specified above. The situation is extremely urgent because it will take weeks to produce the needed equipment, while the peak of hospital cases is also just a few weeks away. Given the vast needs and the difficulty for states and health care providers to vet potential equipment leads, we further urge you to consider federalizing the supply chain distribution. We have a well-grounded fear that an approach to wait and see if existing efforts are sufficient will put vulnerable individuals' health and lives at risk. Invoking this DPA manufacturing authority at that point will be tragically too late.

Under the DPA, authority should be invoked to submit "rated orders" for this equipment. This authority necessarily includes the authority to compel manufacture, but that final step may not be necessary if the immediate financial incentives provided under the act dramatically increase the manufacturing capacity to promptly meet the need, as expected. That is what happened in World War II and it can happen in this war.

Finally, we note what an extraordinary request this is. But these are extraordinary times. The short-term temporary conversion of manufacturing capacity to fight this war and meet the urgent national need is an action that only a decisive war president can take, for the nation's overall good, and you will be widely appreciated for taking that action. We urge you to take it immediately, while there is still time left to ramp up production and prevent the national catastrophe of tens or hundreds of thousands of American lives being lost for want of effective medical equipment or protective equipment.

Thank you for your ongoing leadership during this extremely challenging national crisis. If you have any questions, please contact Sheldon Toubman ([stoubman@nhlegal.org](mailto:stoubman@nhlegal.org) or 203-710-8104) or Lew Golinker ([lgolinker@aol.com](mailto:lgolinker@aol.com) or 607-227-6213).

Respectfully,
