

**AMERICAN ASSOCIATION ON HEALTH AND DISABILITY RESEARCH BRIEF  
VOLUME 1, NUMBER 5 2020**

**COVID-19 & DISABILITY SURVEY: KEY FINDINGS ON HEALTH CARE FOR  
PERSONS WHO ARE DEAF OR HARD OF HEARING**

**Introduction**

People with disabilities experience unique risks during disasters, epidemics, and pandemics that can impact health and health care. *Yet, we do not know the full impact of COVID-19 on people with disabilities.*

**Research Approach**

AAHD conducted the COVID-19 and Disability Survey between April 17 and May 1, 2020, and 2,469 adults with disabilities responded. Adults who are Deaf or Hard of Hearing made up 7% of the sample (182 persons).

**Main Findings- Access to Regular Health Care & Services**

**Use of Direct Care Workers & Impact of COVID-19 for Persons with Mobility Disabilities**

- Only 13% of respondents reported having a Direct Care Worker (DCW).
- Of these, 81% were still receiving DCW services during the pandemic.
- **65% of respondents still receiving DCW services were unable to maintain safe distances from their Direct Care Worker.**

**Access to Regular Health Care Treatment**

- 50% of respondents who needed regular health care (such as physical therapy, dialysis, etc.) were able to receive it during the pandemic.
- **50% of respondents needing regular health care reported their access had been disrupted during the pandemic.**

**Access to Prescription Medications**

- Among respondents taking prescriptions, 93% reported no access problems.
- **Only 7% of respondents reported access to prescription medication access had been disrupted during the pandemic, but any disruption of life-sustaining medication can be critical.**

**New Challenges to Accessing Health Care**

- 67% of respondents reported that they were not facing new challenges to accessing health care.
- **33% of respondents reported new challenges to accessing health care and prescriptions!**

**Conclusion**

- **Population-based research is critically needed to fully document these problems.**
