

**AMERICAN ASSOCIATION ON HEALTH AND DISABILITY RESEARCH BRIEF
VOLUME 1, NUMBER 7 2020**

**COVID-19 & DISABILITY SURVEY: KEY FINDINGS ON HEALTH CARE FOR
PERSONS WHO ARE BLIND OR WITH SERIOUS DIFFICULTY SEEING (VISION DISABILITY)**

Introduction

People with disabilities experience unique risks during disasters, epidemics, and pandemics that can impact health and health care. *Yet, we do not know the full impact of COVID-19 on people with disabilities.*

Research Approach

AAHD conducted the COVID-19 and Disability Survey between April 17 and May 1, 2020, and 2,469 adults with disabilities responded. Adults with Vision Disabilities made up 8% of the sample (193 persons).

Main Findings- Access to Regular Health Care & Services for Persons with Vision Disabilities

Use of Direct Care Workers & Impact of COVID-19

- 22% of respondents reported having a Direct Care Worker (DCW).
- Of these, 78% were still receiving DCW services during the pandemic.
- **61% of respondents still receiving DCW services were unable to maintain safe distances from their Direct Care Worker.**

Access to Regular Health Care Treatment

- 51% of respondents who needed regular health care (such as physical therapy, dialysis, etc.) were able to receive it during the pandemic.
- **49% of respondents needing regular health care reported their access had been disrupted during the pandemic.**

Access to Prescription Medications

- Among respondents taking prescriptions, 97% reported no access problems.
- **Only 3% of respondents reported access to prescription medication access had been disrupted during the pandemic, but any disruption of life-sustaining medication can be critical.**

New Challenges to Accessing Health Care

- 58% of respondents reported that they were not facing new challenges to accessing health care.
- **42% of respondents reported new challenges to accessing health care and prescriptions!**

Conclusion

- **Population-based research is critically needed to fully document these problems.**
